

## CV Roland Frindik

Roland Frindik holds a MSc in transport infrastructure and transportation engineering from the Technical Universität Karlsruhe, Germany. Mr. Frindik had been vice president of the non-profit research association for intermodal transport SGKV in Germany for 8 years, where he initiated research projects on innovative technologies, contributed to standards, reference books as well as monthly intermodal newsletter and evaluated terminal grant proposals. He invented the first intermodal terminal survey. Mr. Frindik is for more than 3 years managing director of the German leg of the international MARLO Group, a transport and logistics consultant as well as an ICT provider. MARLO has introduced the first common framework for information exchange in freight transport, which is now applied in the e-Freight initiative of the European Commission and various transport modes, of which Mr. Frindik introduced first in IWT. Beside numerous European RTD projects he is also advisor to the Federal German Transport Ministry BMVBS on intermodal transport. His expertise includes logistics concepts, intermodal transport management, terminal operations, cargo handling technologies, inland waterway transport, carbon footprint calculation and information management in freight transport.
