

Inge Lucassen

works for TNO, a Dutch research institute for applied sciences in the field of international logistics and compliance, especially related to the e-Freight domain. She works on improving the logistics chain with advanced information management and technologies. In the EU project CASSANDRA, which is focused on improving information quality and risk management in global supply chains, she coordinates the project demonstrations between Asia and Europe. In this role, she is involved with academic research on one hand and the business operations on the other. In the EU project COMCIS, she works on improving information availability in support of hinterland and synchronodal transport. Her ambition is to translate innovative concepts to practical solutions that can support logistics operations.
